Artificial Artificial Intelligence

Your Account    HITs    Qualifications

Already have an account?  
Sign in as a [Worker](#) | [Requester](#)

Introduction | Dashboard | Status | Account Settings

**Mechanical Turk is a marketplace for work.**  
We give businesses and developers access to an on-demand, scalable workforce.  
Workers select from thousands of tasks and work whenever it's convenient.  
**476,446 HITs** available. [View them now.](#)

## Make Money by working on HITs

HITs - *Human Intelligence Tasks* - are individual tasks that you work on. [Find HITs now.](#)

### As a Mechanical Turk Worker you:

- Can work from home
- Choose your own work hours
- Get paid for doing good work

or [learn more about being a Worker](#)

## Get Results from Mechanical Turk Workers

Ask workers to complete HITs - *Human Intelligence Tasks* - and get results using Mechanical Turk. [Register Now](#)

### As a Mechanical Turk Requester you:

- Have access to a global, on-demand, 24 x 7 workforce
- Get thousands of HITs completed in minutes
- Pay only when you're satisfied with the results

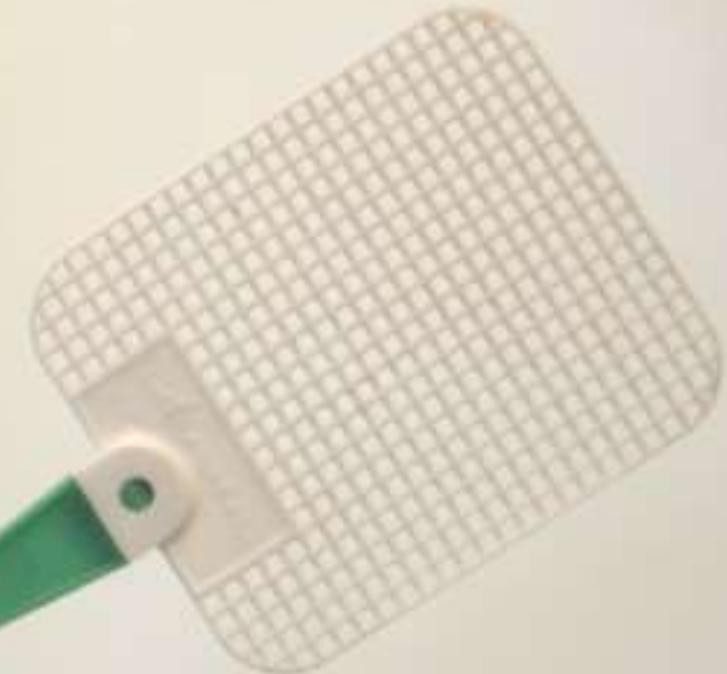

# Security Warnings

# Users swat away warning dialogs

How can we get users  
to pay attention?

# NEAT and SPRUCE (from Microsoft)

Rob Reeder, Ellen Cram Kowalczyk, and Adam Shostack. Poster: Helping engineers design NEAT security warnings. SOUPS 2011.

[http://cups.cs.cmu.edu/soups/2011/posters/soups\\_posters-Reeder.pdf](http://cups.cs.cmu.edu/soups/2011/posters/soups_posters-Reeder.pdf)

- NEAT – 4 questions to ask when you design a security or privacy UX
- SPRUCE – 6 elements to include in a security or privacy UX
  - Good advice, but sometimes it may be better to keep it short and simple rather than include all 6 elements

Ask yourself: Is your security or privacy UX:

**NECESSARY?**

Can you change the architecture to eliminate or defer this user decision?

**EXPLAINED?**

Does your UX present all the information the user needs to make this decision? **Have you followed SPRUCE? (see back)**

**ACTIONABLE?**

Have you determined a set of steps the user will realistically be able to take to make the decision correctly?

**TESTED?**

Have you checked that your UX is NEAT for all scenarios, both benign and malicious?

**NEAT**

## When you involve the user in a NEAT security or privacy decision, explain the decision using these 6 elements:

**SOURCE:** State who or what is asking the user to make a decision

**PROCESS:** Give the user actionable steps to follow to make a good decision

**RISK:** Explain what bad thing could happen if the user makes the wrong decision

**UNIQUE KNOWLEDGE** user has: Tell the user what information they bring to the decision

**CHOICES:** List available options and clearly recommend one

**EVIDENCE:** Highlight information the user should factor in or exclude in making the decision

# SPRUCE

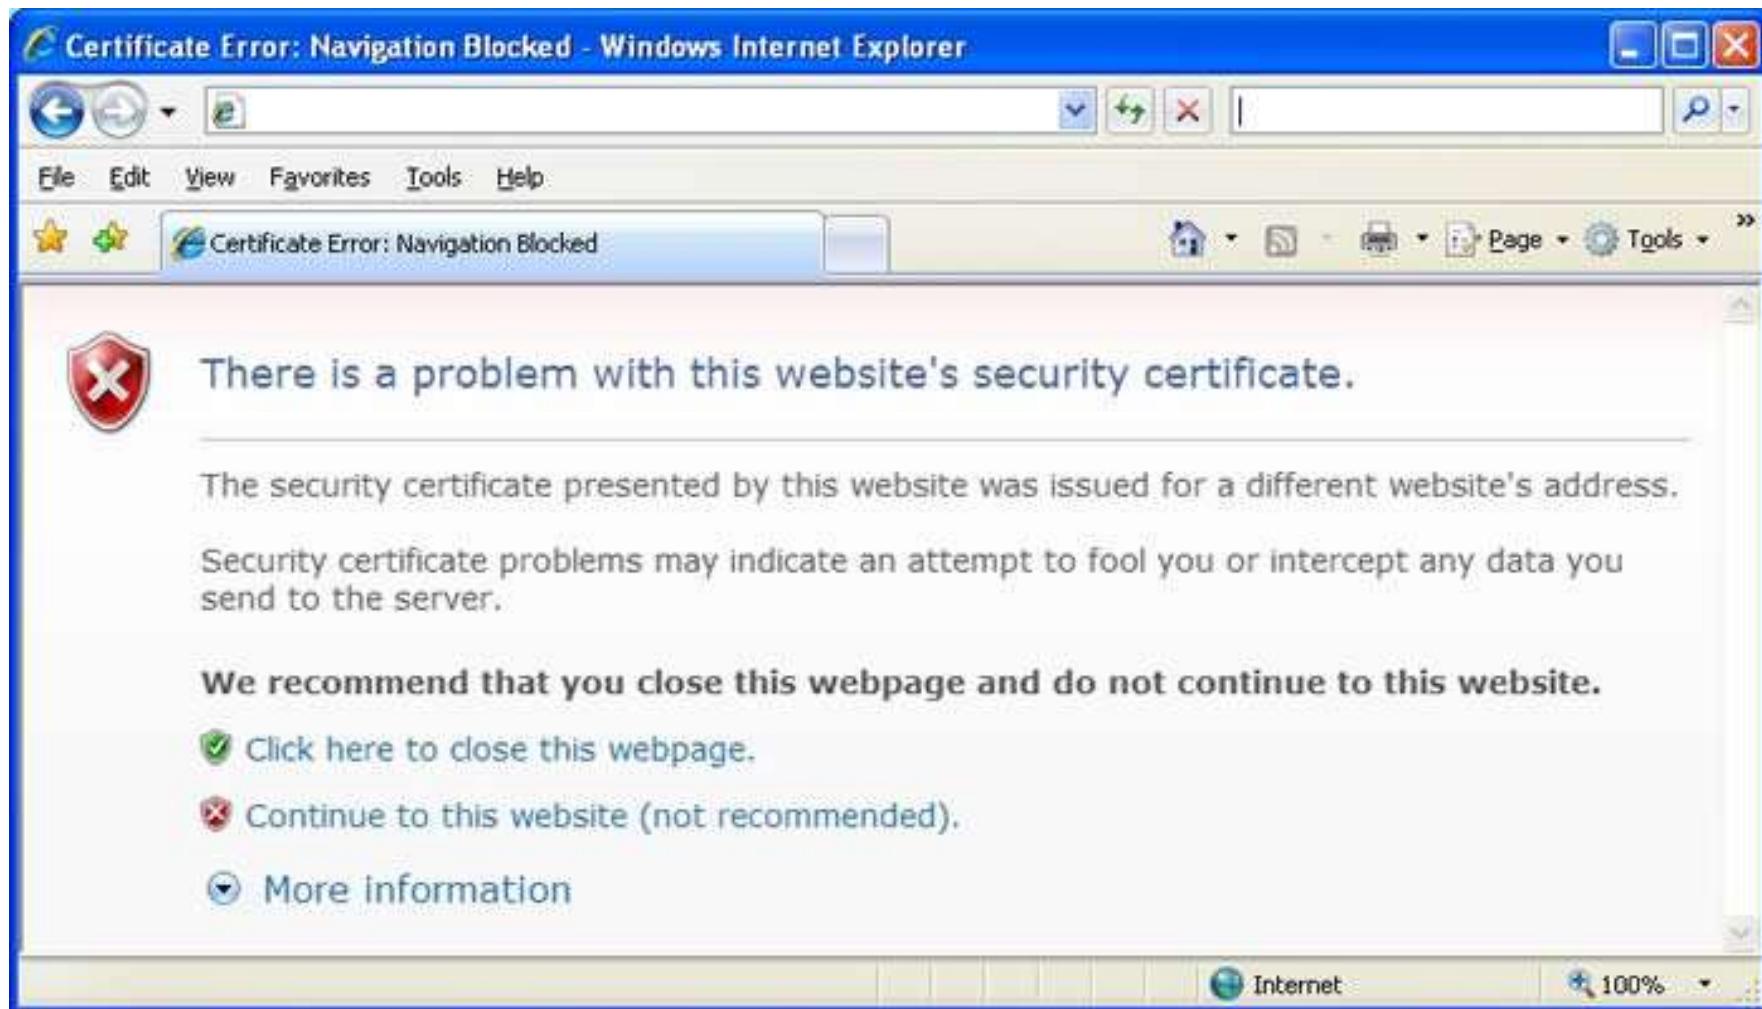

For more info, contact [neatux@microsoft.com](mailto:neatux@microsoft.com)

# Alice in Warningland

# Old Warning (IE 6)

# Slightly Newer Warning (IE 7)

# Newer Warning (Firefox)

## This Connection is Untrusted

You have asked Firefox to connect securely to [www.reddit.com](http://www.reddit.com), but we can't confirm that your connection is secure.

Normally, when you try to connect securely, sites will present trusted identification to prove that you are going to the right place. However, this site's identity can't be verified.

### What Should I Do?

If you usually connect to this site without problems, this error could mean that someone is trying to impersonate the site, and you shouldn't continue.

[Get me out of here!](#)

- ▶ **Technical Details**
- ▶ **I Understand the Risks**

# Newer Warning (Firefox): Step 2

# Newer Warning (Chrome)

## This is probably not the site you are looking for!

You attempted to reach **reddit.com**, but instead you actually reached a server identifying itself as **a248.e.akamai.net**. This may be caused by a misconfiguration on the server or by something more serious. An attacker on your network could be trying to get you to visit a fake (and potentially harmful) version of **reddit.com**.

You should not proceed, **especially** if you have never seen this warning before for this site.

[Proceed anyway](#)

[Back to safety](#)

---

► [Help me understand](#)

# Alice in Warningland takeaways

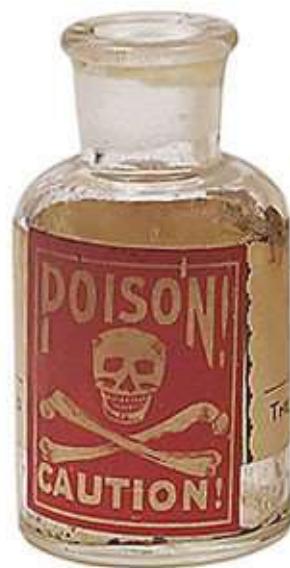

- Field study: correlation or causation?
- Is clicking through an SSL warnings always wrong?
  - Technically skilled users (e.g., Linux users) ignored warnings more often
- Comparison with lab studies
- Prior lab study using eye-tracking software (Whalen and Inkpen)

# More takeaways

- Passive warnings vs. interstitial warnings
- Consent and ethics
- Sampling bias
- Dealing with noisy data
  - Differences between Chrome and Firefox
- Certificate pinning
- HSTS (HTTP Strict Transport Security)

How do you know when you are actually at risk?

# Some hazards are ALWAYS dangerous

# Some hazards are context dependent

# Computer security dialogs are context dependent

- Security warning dialogs more like warnings on wine than warnings on poison
- Software developers place burden of assessing risk on users

# A good warning helps users determine whether they are at risk

- Stops users from doing something dangerous in risky context
- Doesn't interfere with non-risky contexts
- Need to test warnings in both contexts

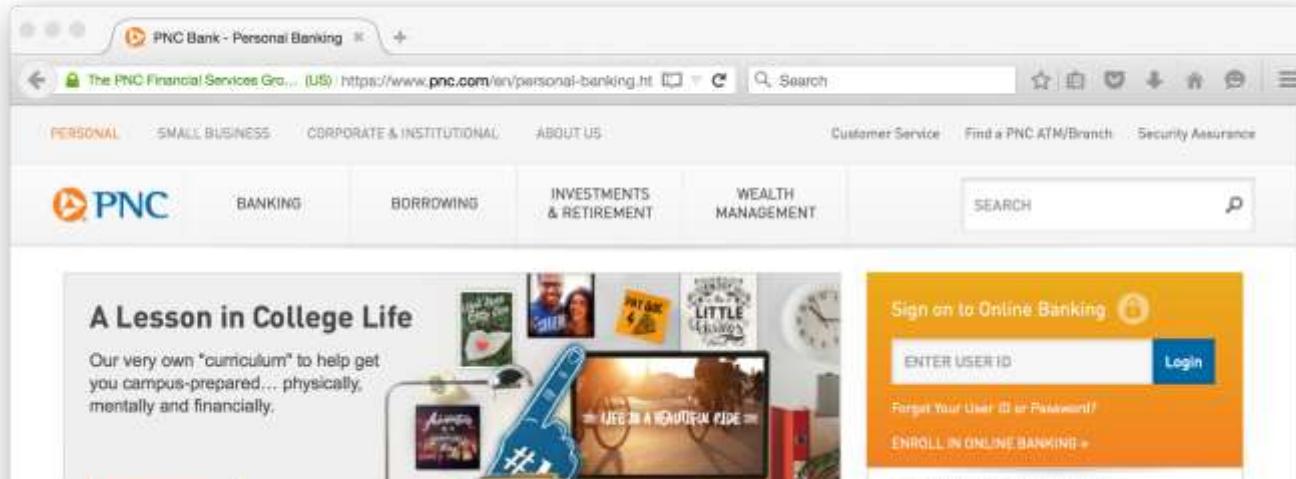

# Non-risky context

- Encounter self-signed certificate (familiar experience for developers)

# Risky context

- Put users in situation where they have something they care about at risk
  - Come to our lab and check bank account balance online
- Make users think they are actually at risk
  - Use web proxy to do man-in-the-middle attack

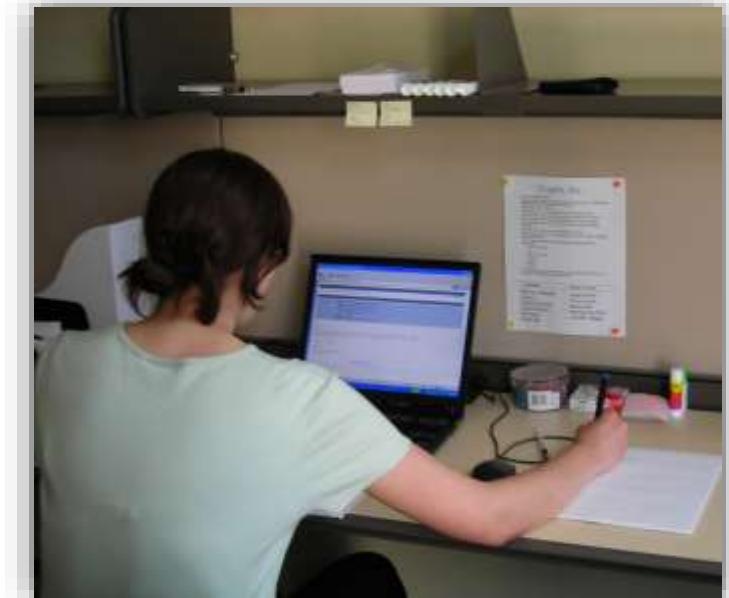

# New plan

- Remove root certificate from browser
- Web site certificates can't be verified
- Visits to secure sites will trigger warnings

# Lab study challenges

- Participants may feel safe
- They may think they have to do everything we tell them
- Their priority may be to finish study fast and get paid

# Security-decision UI study

- How can we focus users' attention on key information they need to make informed decisions?

# Can you spot the suspicious software?

benign

suspicious

# Key question: Do you trust publisher?

Name of publisher is critical information in trust decision

# How can we get users to notice suspicious publishers?

- Use **attractors** to draw attention to publisher name
- Force delay before users can install
- Force interaction before users can install
- Force users to read publisher name

# ANSI standard warning colors

# Obstruct install button until user types publisher name

# Do any of these work?

- Do attractors and other techniques prevent suspicious installs without preventing benign installs?
- How much do attractors delay benign installs?

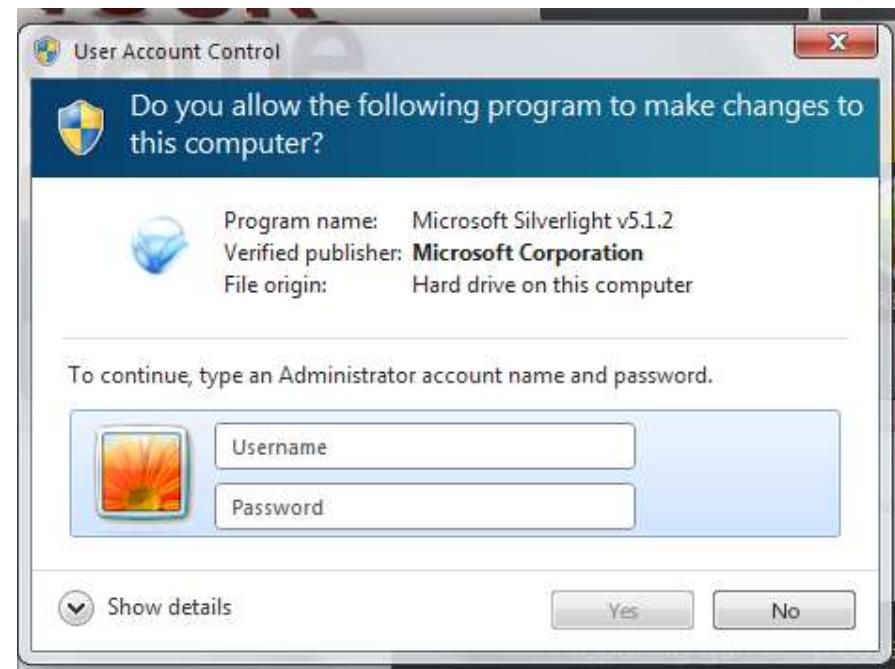

# Methodology requirements

- Massive, inexpensive, quick
- Remote observation/recording of behavior
- Participants should feel safety/risk and behave as they would in real life
- But should not actually be at increased risk through participation in experiment

# Use Mturk game ruse

- Ruse previously developed for study of whether users would fall for fake OS password dialogs

## Online games evaluation survey

Carnegie Mellon

# Online games evaluation survey

### **Purpose of the study**

This survey is part of a research study conducted by Dr. Julie Downs at Carnegie Mellon University. The purpose of this study is to evaluate online games according to criteria that will be explained in the next pages. You will be asked to go to websites, play a game for 2 to 3 minutes, then return to this survey to give us your opinion on each. The whole survey should take you between 15 and 20 minutes in total.

### **Participants requirements**

Participation in this study is limited to individuals age 18 and older. **You have to physically be in the United States of America to be eligible to participate in this study, and not having taken before any early version of the same survey.**

### **Risks, benefits, and compensation**

The risks and discomfort associated with participation in this study are no greater than those ordinarily encountered in daily life or during other online activities. There may be no personal benefit from your participation in the study but the knowledge received may be of value to humanity. You will receive \$1.00 as a compensation for participation in this study. There will be no cost to you if you participate in this study.

The data captured for the research does not include any personally identifiable information about you. We will collect your IP address only to check whether you qualify for the study.

### **Confidentiality**

By participating in this research, you understand and agree that Carnegie Mellon may be required to disclose your consent form, data and other personally identifiable information as required by law, regulation, subpoena or court order. Otherwise, your confidentiality will be maintained in the

# Participant decision design

- Workers in Amazon's Mechanical Turk aim to:
  - Complete the tasks they accept (otherwise, don't earn money)
  - Minimize the time and effort in each task (each accepted task has an opportunity cost)
- Our message to participants:
  - “You may skip a game. If you do, we will assign you another”
- The decision was designed to gamble time/money for security:
  - Install → Take small risk, play the game, finish sooner
  - Not install → Not take any risks, not play the game, waste time

# Results are encouraging

- 2,227 participants encountered dialogs
- Benign scenario
  - Installation not prevented
  - But some approaches slowed people down
- Suspicious scenario
  - Our new dialogs reduced installations
  - Swipe, type, and delay were particularly effective

# Debrief is crucial for ethics!

- Explain what the actual purpose of the study was
